WATER RESOURCES RESEARCH

Problems and Potentials for Agriculture and Rural Communities

Water Resources Research... presents the thinking of a group of prominent researchers on the issues of water quality, availability, and use in the United States. The book looks at the history of water resources research and outlines current research efforts. It then assesses the potential research contributions from several disciplines to resolve water problems and discusses alternative means for implementing that research. Multidisciplinary cooperation is emphasized throughout.

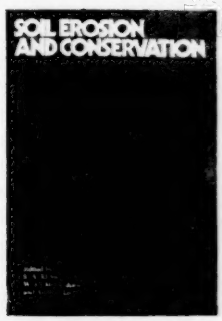
Soil Erosion and Conservation

Based on papers from the third International Conference on Soil Erosion and Conservation, this new book from SCSA delves into problems of erosion and land degradation around the globe. It's a comprehensive volume, written by experts from developed and developing countries, that outlines how erosion prediction and control techniques can or cannot be applied in developing countries. A must book for all erosion specialists.

SOIL CONSERVATION SOCIETY OF AMERICA

Chapters focus on
- Delineating the magnitude of erosion
- Quantifying erosion's impacts on productivity
- Establishing values for erosion-causing parameters
- Creating networks to implement conservation programs



806 pages, 6 x 9 inches
ISBN 0-935734-11-2
$35; SCSA/WASWC members, $30

NEW FROM SCSA

CONSERVING SOIL

INSIGHTS FROM SOCIOECONOMIC RESEARCH

Stephen B. Lovejoy and Ted L. Napier, Editors

Conservationists have long sought the ultimate technology for controlling soil erosion. But while technology is a necessary condition for conserving soil, it is not a sufficient condition. Access to information, the role of institutions, and barriers to the wise use of soil and water resources also are important.

Conserving Soil... examines the results of socioeconomic research to determine why farmers do not adopt erosion control practices. It focuses on four main concerns:
- ► Effects of institutional environments on conservation behavior
- ► Information needed to make conservation decisions and how various sources of information affect conservation behavior
- ► Social and institutional barriers to the adoption of conservation
- ► Implications for policy development and program implementation
